> SWOT-Analysis of the workshop

<u>Strengths</u>: diversity of offerings, attractive offers that are visited repeatedly, good correlation between projects and curricula, available grants, know-how, professional organisations, high interest on developing a powerful network

<u>Weaknesses</u>: Currently insufficient networking, partly a lack of internal and external support, schools don't know some good regional and local offers

<u>Opportunities</u>: Next regional STEM forum 2014, high interest on cooperation and networking, Internet platform, more institutionalization, using synergy-effects

<u>Threats</u>: Sustainability, success depends on individual commitment, most STEM offers are only until class 9
